Siddharth Malviya *Automation Test Engineer (SDET)*

sidmlv43@gmail.com | +91-94548-76178 | Noida, India | github.com/sidmlv43

PROFILE

SDET with 1 year 2 months of experience building and enhancing scalable test automation frameworks for web, mobile, and API applications. Skilled in Java, Selenium, RestAssured, Appium, Cucumber, and TestNG, with CI/CD integration through Jenkins, Maven, and Git, plus working knowledge of Python, JavaScript, and MongoDB. Delivered measurable improvements including a 40% reduction in test execution time and a diagnostic SDK adopted by multiple engineering teams as a reusable Maven dependency.

EXPERIENCE

Test Yantra Software Solutions Pvt. Ltd., *Automation Test Engineer* 05/2025 – Present
– Client: Sprinklr — Care-Reporting Module Oct 2025 – Present Noida, India
– Client: Zupee — Finance Module
Jun 2025 – Sep 2025

PROJECTS

Care-Reporting Module, *Client: Sprinklr (via Test Yantra Software Solutions)* 10/2025 – Present
- Automated 250+ end-to-end test cases across 11+ dashboard widget types (Table, Pivot, Charts, Copilot) for functional and regression coverage in an Agile/Scrum workflow
- Cut test execution time 40% (10+ minutes to under 6 minutes) by eliminating redundant waits and building a DashboardPool utility
- Built reusable POM-based utility libraries for chart, table, and graph interactions, reducing new test onboarding time

Care-Reporting SDK, *Client: Sprinklr (via Test Yantra Software Solutions)* 11/2025 – Present
- Developed a diagnostic SDK that logs session metadata (timestamps, session/partner IDs) to detect hard-to-reproduce agent login/logout timing discrepancies, reducing mean time to detect (MTTD) for intermittent defects
- Adopted as a Maven dependency by other automation teams at Sprinklr, extending its use beyond the original Care-Reporting scope
- Extended the SDK for modular, minimal-config integration across multiple automation frameworks

Finance Module, *Client: Zupee (via Test Yantra Software Solutions)* 06/2025 – 09/2025
- Automated 40+ RestAssured/Postman test cases across wallet, balance, and payment APIs; migrated 70+ legacy cases to internal tools (Trace, Essence), cutting maintenance overhead
- Automated a 4-stage Android KYC workflow (onboarding, document upload, ID verification, status tracking) using Appium
- Built BDD scenarios (Cucumber + TestNG) with WireMock service virtualization for 2 third-party APIs (payment and KYC)

Restful Reads API Testing, *Personal Project — github.com/sidmlv43/restful-reads-api-testing* 05/2026 – 08/2026
- Designed a RestAssured/TestNG/Cucumber framework from scratch for a Node.js/Express/MongoDB API with centralized endpoint management and environment-based configuration
- Built a custom UseUser annotation with a listener-based design pattern (IInvokedMethodListener) for declarative, role-based test authentication
- Engineered thread-safe parallel execution using ThreadLocal session isolation and a ConcurrentHashMap token cache per role
- Containerized the full test environment with Docker Compose for one-command, reproducible setup

SKILLS

Languages & Frameworks: Java, Selenium WebDriver, Rest Assured, Appium, Cucumber (BDD), TestNG, JUnit, WireMock | **API & Testing Tools:** Postman, Rest Assured, Trace (UI Automation), Essence (API Automation) | **Build & CI/CD:** Maven, Jenkins, Git, GitHub | **Methodologies:** Agile, Scrum, SDLC, STLC, Black Box Testing, Regression Testing, Functional Testing, Integration Testing, BDD | **Defect Tracking:** JIRA (defect logging, bug lifecycle management, sprint tracking)

EDUCATION

Bachelor of Technology in Computer Science & Engineering, *Babu Banarsi Das Institute of Technology* 2015 – 2019
- First Division Uttar Pradesh, India
- Note: Following graduation, pursued self-directed upskilling in Java, software testing fundamentals, Selenium WebDriver, and automation frameworks before transitioning into the industry in 2025.
